

## **How Men Can Readily Enhance Sexual Performance & Responsiveness without Relying on ED Drugs: Spotlight on the “Dr Erector” Gentle Electrostimulation Device**

By

Anthony G. Payne, Ph.D.

When it comes to enhancing sexual responsiveness and performance, most men would agree that a “gadget fix” beats an “ED drug fix”. After all, gadgets sport few if any side effects while ED drugs do. In addition, buying a device for \$20-150 that “keeps on keeping on” beats the Hell out of handing a pharmacy what often are sizeable chunks of change on a regular basis.

One relatively low cost but effective ED remediating gadget worth a proverbial “look, see” is the increasingly popular “Dr. Erector”.

The aptly named “Dr. Erector” is an ingenious little battery powered device made in Europe (Finland) which ably serves a dual purpose: It provides users with what amounts to a gentle though powerful pulsating “electric current massage” of the prostate which is highly stimulating and pleasurable in its own right; but just as important or perhaps more so, it jump-starts the erection machinery in the male body which leads to firmer, stronger erections.

The device itself is basically a soft plastic wand with a metal cap at the “business end.” It is inserted anally and positioned so as to rest up against the prostate gland. Once it kicks in this simple though effective little gadget goes to work sending truly pleasurable electric stimulation coursing through the prostate and the nerves that facilitate erections.

Not surprisingly, many users report that not only are their erections harder but their orgasms more intense and their ejaculations more copious with use of the “Dr. Erector” device. This makes sense really, as electrostimulation has been shown by researchers to bring about orgasms and ejaculation in both animals and people.

As a matter of fact, doctors employ “ejaculation by electrostimulation” to help men with spinal cord injuries who have ED (impotent) to ejaculate (The semen can then be harvested and used to impregnate their mates or deposited in a sperm bank). Mind you, the electrostimulation technology used to achieve this employs far more electrical current than the Dr. Erector device (AC or wall current as opposed to DC from batteries as is the case with the Dr. Erector device).

Erection enhancement aside, there may be some profound medical benefits for men who have more frequent, copious ejaculations. A number of studies indicate that regular ejaculations help flush the prostate of carcinogenic compounds that accumulate there and, by so doing, reduce the risk of developing prostate cancer.

If you are a man who has been looking for a genuine alternative to the use of ED drugs, there is “Dr. Erector”. The right tool for the job, as the old saying goes.
